

## New swinging shape for ceilings

Perfectly designed Floating Ceilings lastingly enhance any conventional ceiling construction. They improve noise absorption and thus selectively contribute to improved room acoustics. Furthermore, they offer the possibility of integrating chilled ceiling floating elements and fitted ceiling components (sprinklers, illumination, ventilation, etc.) in a great variety, always easily accessible.

The Floating Ceilings are manufactured upon request within a short time of drawing approval in accordance with customer specifications, pre-assembled and – if huge in size – disassembled again into manageable segments for ease of transport and on-site handling.

Simple installation technology assures easy handling and particularly quick processing.

### Perfect design available ex factory

The unique prefabrication offers decisive advantages:

- Optimum joint appearance without visible panel edges
- Wide choice of shapes, colours and functions
- Perfect complement to old ceilings
- Easy installation
- Custom solutions can be produced at short notice
- Perfectly prefabricated floating ceilings for direct final installation – it could not be easier
